

PURIFOG⁺

***The only system for
complete cleaning and
hygienizing of the air.***

Why is PURIFOG more effective than other systems on the market?

*The systems on the market use disinfectant products that act on viruses and bacteria thanks to a chemical action. They contain active ingredients that are effective on specific strains of viruses and bacteria. The spectrum of action of these disinfectants is therefore not unlimited. The **Purifog** fluid, sprayed through the Thermospray Hygiene Fogging Systems, it is the only working through a mechanical action and therefore does not go to discriminate the type of organism but captures every microparticulate, including biological agents, present in the air.*
