

Access control. Made even more accessible.

Protege WX is an out-of-the-box, all-in-one, access control, intruder detection, and building automation system. It is quick to set up and intuitive to use. The web-based interface and mobile app give you the flexibility to work from anywhere - the office, home, or on the road. And the modular hardware design allows you to scale your system as your requirements change.

“WX is by far one of the least complicated systems I have ever programmed. Not only is the support epic, but the product allows a quick and easy transition to my clients.”

- Phillip Hahn, C&S Specialty Systems

Quick to setup, intuitive to use.

With no software to install, deployment is quick and straightforward. Web technology removes the complications and constraints typically associated with software. The familiarity of a web browser and intuitiveness of the interface make learning a breeze. One integrated solution not only saves you time and money on installation, it means there is just one system to train your team on.

One unified solution.

Traditionally, access control and intruder detection systems have worked independently of each other. Protege WX brings these together to provide a single cohesive and unified solution that helps you keep unwanted visitors outside while enabling you to monitor and control access inside.

Anywhere, anytime access.

The web interface and mobile app provide total flexibility enabling you to configure, control, and monitor your business no matter where you are. Check the status, arm or disarm, control lights, locks, signage, heating – even cameras – from anywhere, at any time. Mobile credentials complement the solution even further, by offering the convenience of card-free access from your mobile device.

ProtegeWX[®]

Data security.

ICT's secure encryption algorithms and the latest HTML5 web standards ensure your data is locked safely away onboard the controller. Optional encrypted backup files can be kept offsite or in the cloud.

Quality you can trust.

Every ICT product is designed, manufactured, and dispatched from our state of the art purpose-built premises, with 100% of products going through rigorous testing to ensure superior quality and safety.

Open standards.

Open standards ensure you are not locked out of your data. Integrate with third-party products such as SALLIS, Aperio, and Savant, or have your own developers use the ICT Automation and Control protocol to create a custom integration.

Start small today, go big tomorrow.

Modular hardware design provides the flexibility to accommodate any installation whether it's small, large, residential, or commercial. Expandable modules allow you to scale your system as your requirements change. If you reach capacity, there is an upgrade path to the enterprise level Protege GX.

Explore the Protege WX range.

Protege WX Starter Kits

Designed as a cost-effective option to provide the components required to get your system underway quickly.

Protege WX Controllers

Available in 1 or 2 door models, the Controller is the heart of the system and the central processing device within Protege WX.

Expansion Modules

A range of expansion modules allow you to extend the system and provide additional functionality.

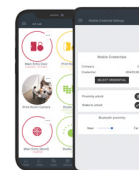

tSec Readers

Equipped with Bluetooth and NFC capability, our tSec readers can be used with the Protege Mobile App and Mobile Credentials to unlock doors using a smartphone.

Keypads

Typically located near an entrance or door, keypads enable you to monitor and control various items within the system and allow areas to be armed and disarmed.

Mobile Solutions

Monitor and control your business while on the go with the Protege Mobile App and use Mobile Credentials for card-free access from your smartphone.
